

Boardwalk Plaza

Brighton Township, Livingston County

Client: Berlington Development Co.

Project Description

Designed and inspected the dual septic system design for the commercial plaza. In order to separate the high strength wastewater from the proposed food services within the complex from the general retail users, a separate septic system was designed for each of the specific uses. The food service system incorporated addition tankage and other system components that were necessary for the longevity of this type of use. The total site capacity was 10,000 gpd.
