Project Description

Access to the staff/visitor parking lot was through the bus drop-off driveway. Parents dropping off or picking their children up were stacking up into the bus driveway blocking buses from getting in and out. A new circulation system was developed by Boss Engineering which separated the bus traffic from the vehicular traffic. A new entrance drive to the staff/visitor parking lot was designed and installed, which required a portion of the parking lot to be reconfigured. The project improved both the student's safety as well as the incidence of vehicle accidents.
