

Greenhills School

Ann Arbor, Michigan

Client: Ann Arbor Architects Collaborative
210 Huron Street
Ann Arbor, Michigan 48104
Mr. Tom Glendening—Project Architect
734.663.1910

Project Description

The project involves incorporating three building additions total 25,000 s.f. to the existing school. The additions have been registered to qualify for the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) certification. LEED emphasizes state-of-the-art green building strategies for sustainable site development, water savings, energy efficiency, materials selection and indoor environment quality. Some of the sustainable design items included in the exterior portion of the project are reduced storm water discharge from the site, low maintenance landscape which incorporates native plant materials with minimal irrigation needed, the use of stored storm water for landscape irrigation and a green roof design.
