### Project Description

Survey, engineering design, construction stakeout and as-built plans for the reconstruction of the Whitmore Lake Road and Lee Road intersection, 1,400 feet of Whitmore Lake Road and 1,100 feet of Lee Road. The design project included the removal of the existing roadway, realignment and regrading, and lane widening for turn lanes to accommodate the Shops at Green Oak development at the southwest corner of Lee Road and Whitmore Lake Road. The design included preparation of easements documents and traffic maintenance plans since the intersection remained in operation during the construction. We worked closely with the Livingston County Road Commission during the design and construction of the road improvements since the roadway was under their jurisdiction. The proposed improvements were also coordinate with the Michigan Department of Transportation due to the adjacent Lee Road / US-23 interchange.
